

TITLE

Clinical Procedures in Primary Eye Care
3rd Edition

AUTHOR

David B. Elliott

PUBLISHER

Butterworth Heinemann Elsevier (2007)

REVIEWER

John D. Jantzi, OD, MSc (Langley, BC)

The third edition of *Clinical Procedures in Primary Eye Care* is a gem that every optometrist should have in the office for reference and/or review. Although written primarily for optometry students, the book provides a comprehensive and up-to-date review of the most commonly used clinical tests and procedures used in contemporary optometric practice.

Utilizing an evidence-based approach, the book is organized into major sections: the primary eye-care examination, assessment of visual function, determination of the refractive correction, assessment of binocular vision, ocular health assessment, and even a section on physical examination procedures. Each one of these major sections is then broken down into the various tests and procedures that are used to evaluate visual function.

Loaded with an abundance of clear illustrations, colour photographs and even video-clips (accessed via an online website), this book discusses virtually every aspect of primary-care eye practice that an optometrist is likely to encounter in daily practice.

This is one book I wish I had had when I was an optometry student: I highly recommend it!

WANTED: ARTICLES

The editors of
CJO*RCO encourage
submissions of clinical
articles, including original
research and case
studies. Contact
info@opto.ca
for more information.
