

Erratum: Design of porous architectures in laser powder bed fusion: effect of hatch spacing and rotation angle on density and pore morphology

The authors have submitted a correction for an error in *Page 2, Line 15* of the published manuscript. In the original article, an initial assumption of a beam spot radius of 75 μm was used, which resulted in the reported E^* and v^* values. The actual beam spot radius was 70 μm , and the corrected values are: $E^* = 20.6$, $v^* = 2.39$.

This correction does not affect the findings or conclusions of the study, as the corrected values remain within the same region and melting mode.

The correction is reflected in the updated version of the paper.
